

WHAT IS PULL SYSTEM?

WHAT IS PULL SYSTEM?

VITAL COMPONENT OF JUST IN TIME (JIT) & LEAN IMPLEMENTATION

- 
1. OPTIMIZING THE SUB-PROCESS
 2. NOT LOOKING AT THE VALUE STREAM AS A WHOLE

**ORGANIZATIONS PRODUCE
MORE THAN THE
CUSTOMERS WANT**

**STORE THE EXCESS AS
INVENTORY OR WORK-IN-
PROGRESS**

**TEND TO PUSH THE
FINISHED GOODS TO THE
NEXT PROCESS**

**IN A PULL SYSTEM, THE PROCESS PRODUCES ONLY WHEN THERE IS
A PULL FROM THE SUBSEQUENT PROCESS.**

WHAT IS PULL SYSTEM?

INDIVIDUAL ITEMS ARE REPLENISHED AS EACH ITEM BEGINS TO RUN LOW ON THE SHELF

A PROCESS SHOULDN'T MAKE ITS PARTS UNTIL THE NEXT PROCESS AFTER IT USES UP ITS ORIGINAL SUPPLY OF PARTS

WHEN THE ORIGINAL SUPPLY OF PARTS IS DOWN TO A SMALL AMOUNT OF SAFETY STOCK, THIS TRIGGERS A SIGNAL TO THE PREVIOUS PROCESS ASKING IT FOR MORE PARTS

WHY PULL SYSTEM?

THE PULL SYSTEM LINKS ACCURATE INFORMATION WITH THE PROCESS

ALLOWS ELIMINATION OF WASTE OF WAITING

ALLOWS ELIMINATION OF WASTE OF OVERPRODUCTION AND THUS WASTE OF INVENTORY

WHEN TO USE A PULL SYSTEM?

IMPLEMENTING A PULL-SYSTEM IS NOT A ONE-TIME ACTIVITY

**IMPLEMENTED IN THE BUSINESS PROCESS WITH APPROPRIATE
LEVEL OF GOVERNANCE**

**MUST BE MONITORED & STUDIED REGULARLY – TO CONTINUE
MAKING IMPROVEMENTS IN THE SYSTEM**
